

Lindsey's Apprenticeship Progress

Lindsey Trujillo ♦ Verizon Apprentice Software Engineer
June 2021 – June 2022

Learnings

Multiverse: Javascript, TDD, SQL, Sequelize, Express, Agile, Responsive Design, React.js, A11Y, RESTful design patterns, Server-Side rendering, The DOM, Auth (Basic Auth & OAuth), JWTs, SDLC, Docker, GitHub Actions, OWASP

Verizon: Earned **Tosca** (test automation program) **certifications levels 1 & 2**, used **Jira** and **qTest** as a member of an Agile QA (quality assurance) testing team conducting **E2E manual testing** of **Verizon.com**, participating in daily stand-ups, grooming calls, and retrospectives as part of 2 week sprints with my team

Independently: Due to my personal interest in the field, I completed a couple of **UX Research** courses on Pluralsight & observed some rapid research sessions at Verizon. I completed a Java course on Treehouse, used **Vue.js** and **Java** for my final independent project, and am currently working towards an **AWS** certification .

Personal takeaways

- Throughout the apprenticeship I learned the value and necessity of being your own advocate and consistently asking questions - in a working environment where everyone is very busy with their own work, and that is mostly remote, it can be challenging to receive the answers you need in a timely fashion while trying to learn and work, so advocating for myself became crucial to my success
- Verizon's adoption of Agile methodology is still new (not all teams use it, but mine does) and as a result, has been a learning experience for myself and even seasoned Verizon employees - I've learned a lot about Agile through observing/participating in meetings such as the daily stand-ups, user story grooming calls, technical discussions, retrospectives, etc.
- Both in Multiverse projects and my work with Verizon I've gained more confidence in my ability to troubleshoot and do research for solutions to any blockers I may face
- Through my work with Multiverse/Verizon I've been able to better determine my own interests and future career goals
